#### Cleaning and Polishing

The most important and valuable dental visit for you is a dental clean and check-up. Teeth cleaning and polishing allows the dentist to maintain your oral hygiene and health. Regular dental cleaning and checkups are important to prevent dental diseases from developing.

#### Dental Filling

Dental fillings may be used in cases of:

- \* Tooth decay, to fill holes that have formed in the enamel but have not affected the inner pulp of the teeth where the blood vessels and nerves are contained
- \* Injured or broken teeth where enamel has chipped off potentially exposing the tooth to decay

#### Dental Implant

Dental implants are medical devices surgically implanted into the jaw to restore a person's ability to chew or their appearance. They provide support for artificial (fake) teeth, such as crowns, bridges, or dentures.

**PROBLEMS FACED :****Issue:**

While constructing the website, we encounter frequent error messages attributed to server limitations, causing a complete halt in our website development process. The problem primarily arises when using 000webhost for hosting.

**Solution:**

From completing the site activities for 30 minutes that, can bypass this error. If our website building activities cannot be completed within this 30-minute window, the recommended course of action is to log out or close the website for a subsequent 30-minute period. During this downtime, no action should be taken on the website. After the 30-minute pause, the server will reactivate, allowing us to resume our website development activities for another 30-minute session. This approach should help mitigate the persistent server error problem during website construction.
